

ASSIGNMENT 2

Migration of instance from one region to another:

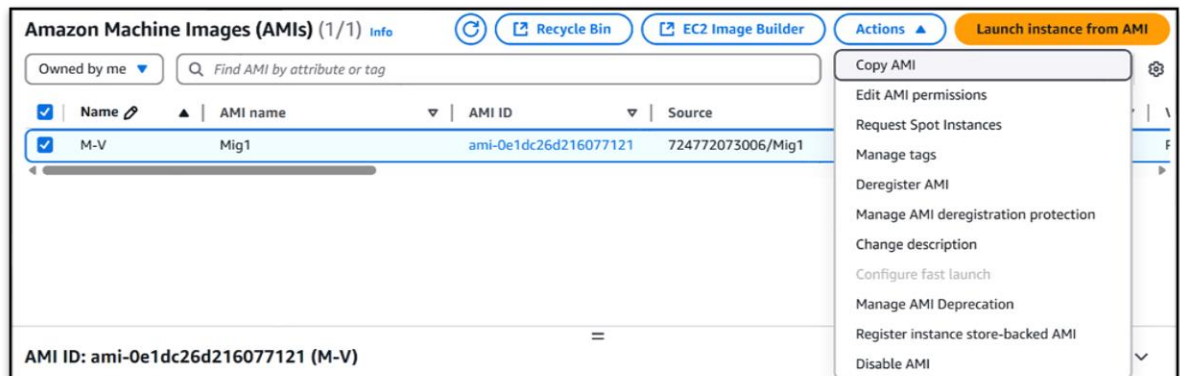

- Select the instance which you want to migrate to another region → Actions tab → Images and templates → Create image.

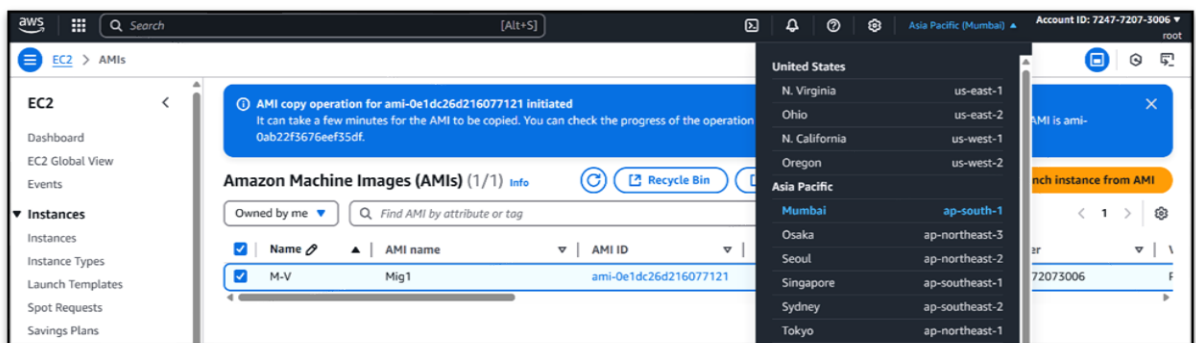

- Image created (Mumbai region):

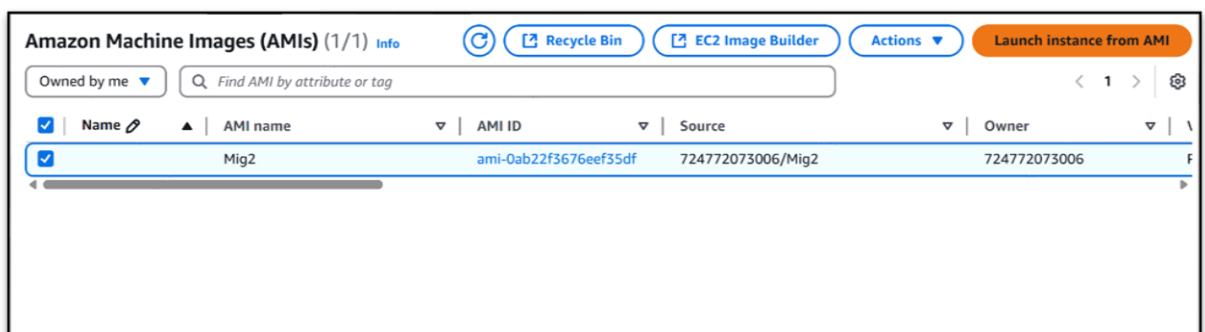

- To migrate the instance you are required to copy the image of the instance to the destination region (N.Virginia): Copy AMI→Name→Description→Destination region→Copy AMI.

- To check if the image has been created in the destination region navigate to the destination region(N.Virginia).

- The copy of AMI has been created in the destination region.

- Launch instance from AMI→Name→Instance type→Key pair→Launch instance.

The screenshot displays the AWS Management Console interface for EC2 instances. At the top, there's a header with 'Instances (1/1)' and a search bar. Below this is a table listing instances. The first instance, 'N.Virginia', is highlighted. The table columns include Name, Instance ID, Instance state, Instance type, Status check, Alarm status, and Availability Zone. The instance 'N.Virginia' has an Instance ID of 'i-0060a5ec112125d5b', is in a 'Running' state, has a type of 't2.micro', and is in the 'us-east-1c' availability zone. Below the table, the details for the selected instance 'i-0060a5ec112125d5b (N.Virginia)' are shown. The 'Details' tab is active, displaying the Instance summary, Instance ID, Public IPv4 address (54.84.57.208), Private IPv4 addresses (172.31.93.19), Instance state (Running), and Public IPv4 DNS (ec2-54-84-57-208.compute-1.amazonaws.com).
