

ASSIGNMENT 1

Task 1:

To create and configure Amazon Route53 with domain creation.

- Open AWS console → Navigate to Route 53 using the search bar → Get started (or) In the dashboard click on Register domain → Check availability of the preferred domain name → If available select (or) select any other suggested domains → Proceed to checkout → Select the duration → Next.

- Contact details: Fill in your contact details such as Name, organization, contact number, email, address and all the necessities → Next → Review and submit. (The amount paid for registering the domain is non refundable but the hosted zone can be deleted to avoid extra charges).

Step 1: Pricing Edit

Domain pricing options

Domain name	Price	Year	Auto-renew
testcloudmarketing.com	15.00 USD Renews at 15.00 USD	1 year	No

Subtotal: 15.00 USD
Applicable taxes will be calculated at checkout.

DNS management fee

Route 53 automatically creates a hosted zone for each new domain you register.
View [pricing details](#) for Route 53 queries and for the hosted zone that we create for each new domain.

Step 2: Contact information Edit

Contact information

Registrant contact Admin contact

- The domain will be successfully registered.
- Hosted zone will be automatically created with the registration of domain, if not create it by entering your domain name→Type→Create the zone where you will manage DNS records (Mail, address, etc.).

Route 53 > Hosted zones > Create hosted zone

Valid characters: a-z, 0-9, !, " # \$ % & ' () * + , - . : ; < = > ? @ [\] ^ _ { | } ~ -

Description - optional Info
This value lets you distinguish hosted zones that have the same name.
The hosted zone is used for...
The description can have up to 256 characters. 0/256

Type Info
The type indicates whether you want to route traffic on the Internet or in an Amazon VPC.

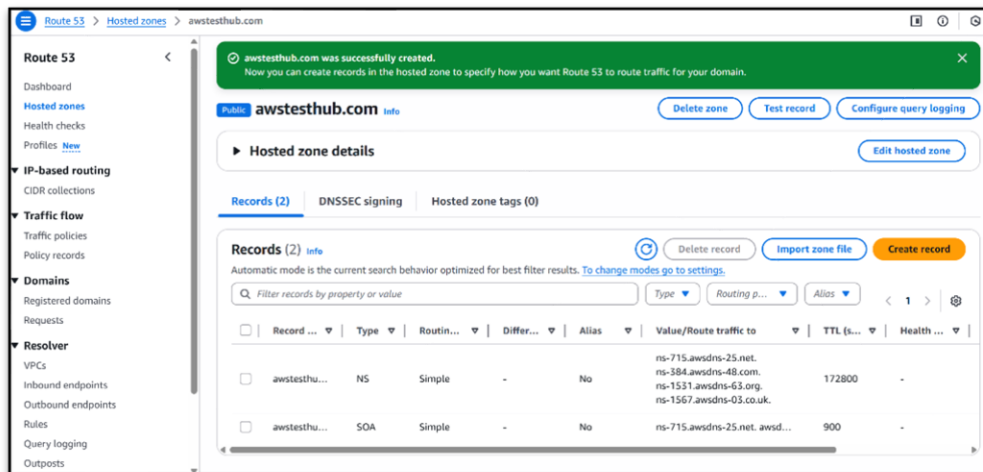

☒ **Public hosted zone**
A public hosted zone determines how traffic is routed on the Internet.

☐ **Private hosted zone**
A private hosted zone determines how traffic is routed within an Amazon VPC.

Tags Info
Apply tags to hosted zones to help organize and identify them.
No tags associated with the resource.
You can add up to 50 more tags.

Add tag

Cancel Create hosted zone

- Configure DNS records: In the hosted zones click Create record → Use quick create record if you're experienced (or) use wizard method → Define simple record → Choose record type (The record that needs to be created) → Routing policy → Endpoint value → Create records.

- These records tell Route53 how to route traffic for your domain or sub domains.
